

THE AGELESS GILBERG

Some years ago, it must have been about 1988, Mark Gilberg, a young and inspired conservation scientist, discovered the ultimate product in the fight against insects: Ageless. The principle was simple. Stick the object in a bag, together with the miraculous powder, and seal it. Do not do anything else - the insects die spontaneously. Mark's young and inspired brain did not need long to work out what had happened: the insects stopped oxidizing and carced it.

Living up to his reputation of being a fast guy, Mark soon made the link with degradation of organic materials through oxidation. It was now 1993, Mark was still young and inspired, and he had figured out that by sealing an object in a bag together with the wonder stuff, one could stop the ageing process in almost anything. Anything?

Now it is 1995, and Mark is still a young and inspired conservation scientist. How does he do it?

Indeed: a teaspoon of Ageless, three times a day!

CAUTION: Do not try this in combination with a plastic bag!
